OPEN TO NEW OPPORTUNITIES

Backend developer who builds production systems that scale. I design APIs, async job pipelines, and low-latency services for multi-tenant SaaS products. Focused on distributed architectures, database performance, and shipping reliable software.

Experience

Backend Developer

Vyrin Lab

2024 — PRESENT

Django · DRF · PostgreSQL · AWS S3 · Redis · Celery

- Sole backend developer for **Apparelte**, a fashion social platform. Designed 40+ API endpoints from scratch for feeds, social interactions, and discovery.
- Built async media pipeline with AWS S3 + Celery, reducing image upload latency by **85%** (3.2s → 480ms).
- Implemented Redis-cached feed system for personalized content delivery. Cut redundant DB queries by 70%.
- Optimized high-traffic endpoints, reducing average DB response from 120ms to **18ms**.

Freelance Software Developer

Self-employed

2023 — 2024

Next.js · TypeScript · React · Tailwind CSS · Vercel

- Delivered production websites for multiple SMB clients across different industries.
- Built **Korkmaz Elektrik** with Next.js 15, achieving 98/100 Lighthouse score via static generation and edge caching.
- Developed **Albayraklar Oto Servis** as a zero-dependency, SEO-optimized site with JSON-LD structured data.

Selected Projects

Screenshot API

screenshot-web-five.vercel.app

Go · Fiber · go-rod · FastAPI · PostgreSQL · Redis · Docker · Stripe

Production-grade SaaS with microservice architecture. Built a Go renderer (Fiber + go-rod) replacing Playwright, reducing memory from ~200MB to ~50MB idle. Browser pool eliminates cold-start latency (~2s per request). Features SSRF protection, ad blocking, 4-tier rate limiting, and Stripe billing.

Apparelte

apparelte.com

Django · DRF · PostgreSQL · AWS S3 · Redis · Celery · JWT

Fashion social platform backend with engagement-based feed algorithm, full-text search, and async media pipeline reducing upload latency by 85%.

IMDb Clone

github.com/onurmacit/imdb-clone-backend

Django · DRF · PostgreSQL · Redis · Celery · Docker · GitHub Actions

Full-stack movie database with JWT auth, Redis caching, Cloudinary integration, and CI/CD pipeline running automated tests on every PR.
