EDUCATION

Computer Programming

Karadeniz Technical University

2020 — 2024

Backend engineer focused on Django, Go, distributed systems, async processing, caching strategies, and scalable API design. Built and maintained production SaaS products serving real users with emphasis on performance optimization and reliability.

Experience

Backend Developer

Vyrin Lab

Early-stage product team · production SaaS

Django · DRF · PostgreSQL · AWS · Redis · Celery

2024 — PRESENT

- Sole backend developer for **Apparelte**, a production fashion social platform with real users. Designed and maintained backend architecture for 40+ API endpoints handling thousands of daily requests.
- Designed event-driven background task workflows with Celery workers processing thousands of media tasks daily for uploads and notifications.
- Designed asynchronous media processing pipeline (AWS + Celery), reducing image upload latency by **85%** (3.2s → 480ms).
- Designed caching strategy for personalized feeds with Redis, cutting redundant DB queries by **70%**.
- Optimized high-traffic endpoints through query tuning and indexing, reducing average DB response from 120ms to **18ms**.

Freelance Software Developer

Self-employed

2023 — 2024

- Delivered production web applications for SMB clients, from requirements to deployment on Vercel.

Selected Projects

Screenshotbeam

screenshotbeam.com

Go · Fiber · go-rod · FastAPI · PostgreSQL · Redis · Docker · Stripe

- Built production-grade screenshot SaaS with distributed microservice architecture: FastAPI orchestrator for auth, billing and job management + dedicated Go rendering service.
- Built concurrent screenshot rendering service in Go (Fiber + go-rod), replacing Playwright and reducing idle memory from ~200MB to **~50MB**.
- Built concurrent browser-pool architecture in Go to eliminate renderer cold starts and improve throughput (~2s saved per request).
- Designed API orchestration layer with 4-tier rate limiting, job queuing via Redis/Celery and Stripe subscription billing.
- Implemented SSRF protection, network-level ad/tracker blocking and S3 storage with CDN.

IMDb Clone

github.com/onurmacit/imdb-clone-backend

Django · DRF · PostgreSQL · Redis · Celery · Docker · GitHub Actions

Movie database API with JWT auth, Redis caching, Cloudinary integration and CI/CD pipeline with automated tests on every PR.
